General Books. Paperback. Book Condition: New. This item is printed on demand. Paperback. 100 pages. Dimensions: 9.7in. x 7.4in. x 0.2in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1862. Excerpt: . . . APPENDIX. THE MUTUAL RELATIONS OF THE CIRCLE, THE SQUARE, THE CUBE, AND THE SPHERE. Some of the properties of the circle having been considered in Part II; Sec; V. , it appears desirable to append to this inquiry a few of the results of an investigation into the relations of the circle to the square, and through these of the cube to the sphere, with a view to determining the differences resulting from changes in form in surface areas or enclosed contents, and more especially those produced by transition from angular to curvilinear figures; In order to do this in a reliable manner, it will be advisable to commence with the rectangle, and consider--1. The variations which arise in the contained areas of parallelograms through slight additions to their circumferences; and 2. Those which occur through changes in form in those whose circumferences are equal. Now, as to the first head of this subject, it is evident that in a parallelogram whose long sides are, say, each equal to 11, and short ones to 1, and thus give a circumference of 24, if 2 be added to this circumference, 1 to each short side, it will become 26; if 2 more, 28; and again, if 2 more, 30; and further, that the same thing will occur if similar additions be made to the long sides instead of to the short ones; but the changes in the contained areas will be very different in the one...
