

The Fundus Oculi of Birds; Especially as Viewed by the Ophthalmoscope; A Study in the Comparative Anatomy and Physiology (Paperback)

By Casey Albert Wood

Rarebooksclub.com, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1917 edition. Excerpt: .and has a bright ring around it of glistening white. The optic disc appears as a long, white oval, with irregular margins. The black-brown, corrugated pecten is very large and long; it extends into the vitreous and almost touches the lens with its clubshaped terminal. Very fine opaque nerve fibres radiate at regular intervals from the whole papillary circumference. In two eyes of this bird examined by the writer there were, in addition to the appearances just detailed, several scattered, reddish-brown deposits, very slightly pigmented, in the choroid. These were found in an individual captive in the Bronx Park for four or five years, and were probably pathological. Ardeiformes AMERICAN BLACK-CROWNED NIGHT HERON. *Nycticorax nycticorax nivalis*. (Figs. 92 and 129; macroscopic view.) There were no definite, naked-eye indications of a fovea in the individuals examined. The pecten, more pointed at its superior extremity, exhibits...
